WEEK 2 · MONDAY · 1 HOUR · WEB PROGRAMMING K0126002

HTML — building a page

10 min	Quiz answers discussion
30 min	HTML structure + core tags
15 min	Attributes + links + images
05 min	Friday preview & homework

QUIZ REVIEW · 10 MIN

What did the pre-class quiz cover?

Q1 What happens when you type a URL and press Enter?

Q2 Which three languages run in the browser?

Q3 What does HTTP stand for?

Q4 What is a server?

Q5 Which file extension do HTML files use?

→ Raise your hand if you got it right. Explain the answer to your neighbour.

CORE CONCEPT

Anatomy of an HTML document

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="UTF-8">
    <title>My Page</title>
  </head>
  <body>
    <h1>Hello, world!</h1>
    <p>My first paragraph.</p>
  </body>
</html>
```

<!DOCTYPE html>

Tells the browser: "this is modern HTML5 — not old HTML4."

<head>

Invisible metadata — page title, character set, CSS links. Not shown on screen.

<body>

Everything the user SEES lives here. Text, images, buttons — all children of <body>.

<h1> / <p>

h1 = biggest heading. p = paragraph. Both are block-level — each starts a new line.

ESSENTIAL TAGS

The 10 tags you'll use every day

`<h1>…<h6>`	Headings (h1 = biggest, h6 = smallest)
`<a href="">`	Hyperlink — connects pages together
`<div>`	Generic block container (for layout)
`<ul> / <ol>`	Unordered / ordered list
`<strong>`	Bold/important text

`<p>`	Paragraph of text
`<img src="" alt="">`	Embed an image
`<span>`	Generic inline container (for styling)
`<li>`	List item (child of ul or ol)
`<em>`	Italic/emphasised text

ATTRIBUTES

Tags can have attributes

Extra info inside the opening tag

```
<!-- Link to another page -->
<a href="https://google.com" target="_blank">Open Google</a>

<!-- Display an image -->
<img src="photo.jpg" alt="A cat sitting on a keyboard" width="300">

<!-- Name an element for CSS / JavaScript -->
<div id="main-header" class="blue-box">
  Content here
</div>
```

href	Where the link goes
src	Image file path or URL
alt	Text if image fails to load (accessibility)
id	Unique name — use once per page
class	Reusable label — use many times
target	"_blank" opens in new tab

LIVE DEMO · 15 MIN

Build: a simple profile page

Watch, then try yourself on Friday

1. Open VS Code (or browser editor)

New file → save as profile.html

2. Type the skeleton

<!DOCTYPE html> → <html> → <head> → <body> (use Emmet: type "!" and press Tab)

3. Add your content

<h1> your name · <p> one sentence about yourself · <img> a placeholder image

4. Add a link

<a href="…"> linking to your favourite website

5. Open in browser

Double-click the file OR drag it into Chrome. Reload after every change.

WATCH OUT

Common beginner mistakes

Forgetting to close a tag

Hello → browser tries to guess where it ends. Always close: Hello

Hello

↓ fix

Hello

Wrong quote style

Use straight quotes " " not curly " " — your keyboard default is correct.

<a href=“https://…”> ✗

<a href="https://…"> ✓

File name mismatch

photo.jpg ≠ Photo.JPG on a web server. Keep names lowercase, no spaces.

<img src="Photo.JPG"> ✗

<img src="photo.jpg"> ✓

BEFORE FRIDAY

Your homework (15 min total)

① Watch the video (10 min)

- Release: Wednesday night on course page
- Topic: Semantic HTML — why it matters
- Quiz opens after you watch

② Do the quiz (5 min)

- Some questions about the video content
- Due: before Friday 09:00
- Opens on the same link as today's quiz

③ Optional: play with your profile.html

- Add more tags from today's slides
- Try changing colours with <style>
- Broken code is fine — bring questions Friday
